J. Opt. Soc. Am. A

1. Maximum likelihood difference scaling of image quality in compression-degraded images
2. Extension of the shape from focus method for reconstruction of high-resolution images
3. Phase retrieval from intensity-only data by relative entropy minimization
4. Properties of coherence-gated wavefront sensing
5. Photonic Metamaterials: Introduction
6. Grating-coupled surface plasmon polaritons and waveguide modes in a silver-dielectric-silver structure
7. Properties of the linear canonical integral transformation
8. Absorption and scattering properties of dense ensembles of nonspherical particles
9. Diffraction of a one-dimensional phase grating in the deep Fresnel field
10. Polarization invariance in a Young interferometer

Opt. Lett.

1. Coherent transfer of an optical carrier over 251 km
2. Influence of the birefringence autocorrelation function on the polarization mode dispersion of constantly spun fibers
3. Fabrication of all-solid photonic bandgap fiber coupler
4. Compact bandwidth-tunable microring resonators
5. Optical detection of terahertz radiation by using nonlinear parametric upconversion
6. Nanoscale microcavity sensor for single particle detection
7. Time-gated Fourier-domain optical coherence tomography
8. In vivo three-dimensional spectral domain endoscopic optical coherence tomography using a microelectromechanical system mirror
9. Laser projection using generalized phase contrast
10. Slot-waveguide biochemical sensor
